The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. Selection of the glove material on consideration of the penetration times, rates of diffusion and the degradation Prior to working with gloves the rubbing in with tanniferous skin-protecting agents for the avoidance of skin softening due to perspiration is recommended.

Chloroprene rubber, CR

Recommended thickness of the material: $\square 0.65 \text{ mm}$

Nitrile rubber, NBR

Recommended thickness of the material: $\square 0.65 \text{ mm}$

The exact break through time has to be found out by the manufacturer of the protective gloves and has to be observed.

The determined penetration times according to EN 16523-1:2015 are not performed under practical conditions. Therefore a maximum wearing time, which corresponds to 50% of the penetration time, is recommended.

For the mixture of chemicals mentioned below the penetration time has to be at least 480 minutes (Permeation according to EN 374 Part 3: Level 3). Value for the permeation: Level 3

Not suitable are gloves made of the following materials:

Leather gloves

Strong material gloves
